

Aerospace Products For Down to Earth Comfort®

Complete Headset Upgrade Kit Components

The World's Greatest Headset Is the One You Already Own!® -- With an Oregon Aero Upgrade Kit.

A: HushKit® Passive Noise Attenuation

Enjoy greater clarity and intelligibility. The HushKit component fills the voids of the ear cup assembly with layers of visco-elastic foam. The speaker becomes detached from the housing and encased between layers of foam. This prevents environmental noise, picked up by the headset, from being mechanically transferred through the speaker and adding to the background noise. In a noisy aircraft you can actually turn down the radio's volume and still be able to understand what is being said.

B: SoftSeal® Ear Cushions

Oregon Aero Ear Cushions are designed to fit over your ears instead of crushing them. Pressure- and temperature-sensitive visco-elastic form cores conform to the shape of your head and form a tight seal — even if you are wearing glasses or earrings.

C: SoftTop® Headset Cushion

The SoftTop replaces your existing headband cushion. This plush, genuine sheepskin cushion eliminates pressure points by distributing pressure evenly. Soft and comfortable padding is also self-wicking and keeps perspiration at bay, allowing your head to remain cooler — or warmer.

D: SoftSkin® EarSeal Covers

Keep your ears cooler and dryer and extend the life of your SoftSeal Ear Cushions by covering them with SoftSkin Ear Seal Covers. Self-wicking fabric reduces perspiration buildup which make these covers especially beneficial in hot and humid conditions.

E: MicMuff® Microphone Cover

The MicMuff Microphone Cover enables a noise-canceling microphone to do its job at noise levels above 97dB. This two-part cover works with your existing microphone to eliminate ambient cockpit noise and improve vocal clarity.
